Accu-Time Systems, Inc. Announces Green Initiatives

Ellington, CT - March 31, 2008 - Accu-Time Systems, Inc., a leading manufacturer of workforce management, time and attendance, and security access products, today announced new initiatives in support of its commitment to environmental responsibility. According to Peter DiMaria, Founder and Chief Executive Officer of ATS, the company has established three aggressive goals in its sustainability efforts:

- To Comply with Industry Standards and Directives
- To Minimize The Impact of its Manufacturing Processes on the Environment
- To Improve its Corporate Environmental Practices

As a global company with offices in the United Kingdom and the Netherlands as well as the United States, ATS was the first Workforce Management terminal manufacturer to announce full compliance with the requirements of RoHS. Just recently, Accu-Tech Systems, Ltd., a wholly owned subsidiary of Accu-Systems, Inc., achieved compliance with the requirements of the WEEE (Waste Electrical and Electronic Equipment) Directive and is now fully certified. WEEE is a European Community directive on waste electrical and electronic equipment which, together with the RoHS Directive, became European Law in February 2003, setting collection, recycling and recovery targets for all types of electrical goods.

With the recent launch of the Global Series at the National Retail Federation Expo in New York, ATS has made a commitment that all components used in Global Series products shall be recyclable and/or land-fill friendly, meeting defined environmental standards for sustainability. All scrap materials incurred during the manufacturing process are recycled back to the manufacturer. In addition, ATS, upon request, will dispose of all product returned by customers

in an ecological-friendly manner. All packaging and shipping materials utilized in conjunction with the Global Series are 100% recyclable and are comprised of a percentage of previously recycled material.

As part of its corporate commitment to “go green”, ATS has undertaken measures to reduce its impact on the environment, including the recycling of all applicable discarded material (including paper, plastic and metal); the installation of automatic, programmable climate control systems to minimize energy use; and, the involvement of employees who are encouraged to “think green” in all aspects of their work and to bring new ideas to management for company-wide consideration.

Mr. DiMaria stated, “Ecologically responsible business practices result in significant gains for our customers, associates and partners. We’re sharing technology and encouraging innovations with our supplier partners to help them optimize their systems and reduce packaging. Many of these practices lower costs and boost productivity, demonstrating that sustainable practices have advantages for everyone.”

About Accu-Time Systems, Inc.

Accu-Time Systems, headquartered in the United States, is the leading provider of biometric and non-biometric workforce management (WFM) and human capital management (HCM) tools. ATS industry-leading products have become widely used for payroll, time and attendance, workforce management, and security access.
